

QXA2601/QXA2603

QXA2602/QXA2604

## Condensation Monitor

**QXA2601**  
**QXA2602**  
**QXA2603**  
**QXA2604**

- Operating voltage AC/DC 24 V or AC 230 V
- Potential free changeover contact AC/DC 1...30 V or AC 230 V
- Simple and fast mounting
- Surface or pipe mounting
- Integrated and remote sensor version available
- Status indication by two colored LED

## Use

For monitoring condensation in buildings with chilled ceilings or in ventilation, air conditioning or heating plant.

The condensation monitors are used:

- to prevent condensation on chilled ceilings
- to prevent condensation at critical spots of HVAC plant or buildings (in air ducts, near fans, etc.)
- as a condensation switch

In general, the condensation monitors are used on all kinds of surfaces where condensation must be avoided.

## Type summary

Type (ASN)	Product number (SSN)	Power supply	Integrated/remote	Switching output
QXA2601	S55770-T325	AC/DC 24 V	Integrated sensor	AC 30 V, 1 A / DC 30 V, 0.5 A
QXA2602	S55770-T326	AC/DC 24 V	Remote sensor	AC 30 V, 1 A / DC 30 V, 0.5 A
QXA2603	S55770-T327	AC 230 V	Integrated sensor	AC 230 V, 1A
QXA2604	S55770-T328	AC 230 V	Remote sensor	AC 230 V, 1A

## Ordering and delivery

- When ordering, please indicate product No./stock No. and description
- Example:

Product No.	Stock No.	Description
QXA2601	S55770-T325	AC/DC 24 V power supply, integrated sensor

### QXA2601/QXA2603

The condensation monitors are supplied with:

- a strap-on band for pipe diameters from 10 to 100 mm

### QXA2602/QXA2604

The condensation monitors are supplied with:

- a strap-on band for pipe diameters from 10 to 100 mm
- 6 self-tapping screws
- 6 expansion bolts

## Equipment combinations

The condensation monitors are suited to be used with all types of devices:

- that operate at AC/DC 24 V and can handle the condensation signal delivered by the monitor's potential free AC/DC 1...30 V relay changeover contact (QXA2601/QXA2602), or
- that operate at AC 230 V and can handle the condensation signal delivered by the monitor's potential free AC 230 V relay changeover contact (QXA2603/ QXA 2604).

With the sensing elements, the monitors acquire the relative humidity close to the dew point (= 100 % r. h.). The resistance of the sensing elements raises sharply in the range of 90...100% r. h. Before reaching the dew point, the electronics energize the relay to trigger counteractions.

## Mechanical design

### QXA2601/QXA2603

The housing is made of flame-retardant thermoplastics with spring-loaded humidity sensing element, holding relay with changeover contact, connection terminals and M16 cable gland made of plastics.

- 1 LED
- 2 Relay output terminal block
- 3 Power in terminal block
- 4 Sensing element
- 5 Tensioning strap

### QXA2602/QXA2604

Versions have similar housings as QXA2601 and QXA2603, but with remote sensor heads (fixed cable connection of 1500 mm) rather than directly integrated sensors.

- 1 Tensioning strap
- 2 Sensing element
- 3 Connection cable 1500 mm to base housing

## Mounting notes

---

The monitors perform their function only when the humidity sensing elements assume the same temperature as the surface to be protected against condensation. The following points should be paid attention to:

- Mount condensation monitors at the coldest spot of the chilled ceiling (plant).
- In the case of water-cooled chilled ceilings, mount the monitors on the water inlet pipe.
- Protect the sensing elements against aggressive chemicals and dirt (both can adversely affect the correct operation of the monitors and drastically shorten their lives).

### Mounting choices

- Pipe-mounting with strap-on band (pipe diameter 10...100 mm)
- Surface-mounting on walls or ceilings: 2 screws for the sensor head; 4 screws for the sensor main housing (QXA2602/QXA2604).

### Note:

The monitors must not be continuously exposed to condensation.  
The monitors are assembled and supplied with mounting instructions CB1M3300 (QXA2601/QXA2603) and CB1M3301 (QXA2602/QXA2604).

## Commissioning notes

---

### Caution!

No special commissioning procedure is required. A functional test can be made by exhaling slowly onto the sensing element several times to simulate condensation.

The LED indicates the status “dew” by turning red.

Do not expose the sensing elements to tap water as this can cause electrolytic corrosion.

The unit may only be wired by authorized and appropriately trained staff and only when disconnected from power. Cables and / or terminals must be labeled.

### Power supply

Local regulations stipulate sizing and fusing of power lines. Power lines must be fused.

### Potential-free Relay output

The potential-free relay output permits switching loads of up to 1 A. Line sizing is oriented to connected load and local regulations. The switching circuits are externally fused without internal protection. The lines must be fused.

### Status indication

Two kinds of statuses can be indicated by the LED:

LED green: operating under normal condition (operating voltage is “on”)

LED red: dew warning

## Disposal

---

In terms of disposal, the room thermostats are classified as electronic scrap conforming to the European Directive 2011/65/EU (WEEE) and must not be disposed of as unsorted domestic waste. The relevant national legal regulations must be complied with and the units must be disposed of via the appropriate channels. Local and currently valid legislation must be observed.

## Technical data

Power supply G, G0 QXA2601/QXA2602	Operating voltage	SELV/PELV AC/DC 24 V $\pm$ 20 %
	Frequency	50/60 Hz
	Power consumption	Max. 1 VA
	External fuse	Transformer with secondary limitation of Max. 10 A, or External secondary power fuse with Max. T 10 A non-renewable fuse, or Max. C 13 A circuit breaker is required in all cases
Power supply (L, N) QXA2603/QXA2604	Safety class	III to EN 60 730
	Operating voltage	AC 230 V $\pm$ 10 %
	Frequency	50/60 Hz
	Power consumption	Max. 4 VA
Function data	External fuse	External secondary power fuse with Max. T 10 A non-renewable fuse, or Max. C 13 A circuit breaker is required in all cases
	Safety class	II to EN 60 730
	Switching point on increase of humidity	92 $\pm$ 4 % r. h. at 25 °C
	Switching differential (fixed)	approx. 5 % r. h.
Output Q11, Q12, Q14 QXA2601/QXA2602	Response time in static air	
	From 80 auf 99 % r. h.	Max. 3 min
	From 99 auf 80 % r. h.	Max. 3 min
	Condensation	Max. 30 min
Output Q11, Q12, Q14 QXA2603/QXA2604	Relay output	Potential free changeover contact
	Current range	AC 1...30 V, 1 A
	Switching capacity	DC 1...30 V, 0.5 A Max. AC 1 A / DC 0.5 A Min. AC/DC 1 V, 1 mA
	External fuse	Transformer with secondary limitation of Max. 10 A, or External secondary power fuse with Max. T 10 A non-renewable fuse, or Max. C 13 A circuit breaker is required in all cases
Protection data	Relay output	Potential free changeover contact
	Starting current	AC 250 V, $\leq$ 10 A for $\leq$ 20 ms
	Switching capacity	AC 230 V, 1 A
	External fuse	External secondary power fuse with Max. T 10 A non-renewable fuse, or Max. C 13 A circuit breaker is required in all cases
Connections	Degree of protection of housing	IP54 to EN 60 529 (not include sensor head)
Connections	Mechanically	strap-on band for pipe dia. 10...100 mm
	Electrical connection	
	Spring-type terminal for cable entry	Max. 1.5 mm <sup>2</sup> Cable gland M16 Ø: Max. 10 mm
